### Primary Examiner-David M. Purol

### **ABSTRACT**

The invention is concerned with a foldable panel device which is useful in the display arts. The foldable panel device is particularly useful as a portable display for use at trade shows. The foldable panel device incorporates a pair of upper and lower panel sections which are pivotally connected to each other on a horizontal plane. The upper and lower panel sections have lateral panels connected thereto and which are capable of depending outwardly therefrom for display purposes. It is preferred that two lateral panels depend outwardly from each vertical side of said upper and lower panel sections.
